Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5 and 9, drawn to a valve system having a full bore feature, classified in class 166, subclass 320.
 - II. Claims 14 and 17-22, drawn to a valve assembly having a sealing device including a primary seat and a secondary seat of different harness, classified in class 166, subclass 332.1.
 - III. Claims 38-48, drawn to a system for controlling fluid flow from a wellbore with a drive mechanism operable to move the sleeve so that the sliding seal does not overlap any orifices, classified in class 166, subclass 319.
 - IV. Claims 49-53, drawn to a valve system, classified in class 166, subclass 316.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions IV and I or II or III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the fullbore feature of Group I, the sealing device of Group II, or the drive mechanism of Group III is not required by the claims of Group IV. The subcombination as defined in Group I or II or III has separate utility such as a single valve assembly to control fluid flow from a formation in a well having a single producing zone.

Inventions I, II and III are distinct from one another because the fullbore feature which is essential in the claims of Group I is not required by the claims of Group II or III. Conversely, the sealing device that is specifically recited in the claims of Group II is not required by the claims of Group I or III. Similarly, the drive mechanism that is specifically called for in the claims of Group III is not required by the claims of Group I or II.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search required for one Group is not required for another Group, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
